

Hot cooking oil filter media

Ahlstrom-Munksjö portfolio of filter media for hot cooking oil offers technology and innovation for the fast food industry.

Our high performance materials are designed to deliver fast flow with good particle retention to maximize filtration efficiency.

Good filtration of cooking oil aids in achieving consistent food quality.

- Meets FDA and NSF indirect food contact standards
- Complete portfolio, including cellulose and synthetic blends of fibers
- Range of particle retentions and flow rates to maximize filtration efficiency
- Resistant to bursting
- High adaptability to the most common fryer equipment
- Customized roll and shape sizes available
